Timothy,

Thank you for your request. The Navy is responsible for the sampling and remediation of Treasure Island and can provide you with more information about whether you can collect soil samples, and make arrangements to do so. I am referring your request to Mr. Keith Forman: phone (619) 524-6073; cell: (415) 308-1458

Also, the California Department of Toxic Substances Control (DTSC) is the primary regulatory agency for Treasure Island, not USEPA. You may also contact the project manager Medi Sunga—phone (510) 540-3840

Or Public relations representative Nathan Schumacher, (916) 255-3650.

Please be aware that there are several issues to consider when sampling contaminated soils and they may need to discuss these with you further. For example: What contaminants of concern are you interested in? What is the nature of your experiment? This may help determine the best locations and evaluation criteria for your samples. Additionally, what health and safety protocols do you have for ensuring the protection of anyone handling contaminated soils? If there are issues with allowing collection of samples, perhaps they can provide you with existing sampling results and data to assist with your research.

Please let me know if you have any further questions. Thank you.

Nadia Hollan Burke, Environmental Engineer

Subject: School project

Dear Ms. Nadia Hollan Burke,

I am a undergraduate student taking a class in analytical chemistry. One of the assignments is to create our own experiment. My partner and I are interested in testing soil samples from treasure island. We would like to analyze soil samples of residential area and unremediated area. I am hoping that you would give us permission to collect the unremediated soil samples. Thank you for taking your time to read this email.

Sincerely,
Timothy Owyang
